indelible.Blob

Decentralized Truth Infrastructure

"Truth begins at the source. Verify everything."

Powered by Walrus, Sui, and Solana Mobile

The Cost of Synthetic Reality

We are losing our shared baseline of truth.
Generative AI has made digital manipulation frictionless.

51%

Identification Accuracy

Human perception is now essentially a coin toss.

70%

Reproducibility Gap

In scientific research, unverifiable origins destroy trust.

$78B

Global Annual Cost

Direct economic impact of deepfake fraud.

Trust, Built at the Sensor Level

indelible.Blob anchors digital media to physical reality the millisecond it is captured.

Provably Authentic

Hardware-backed cryptographic signatures.

Immutable Storage

Decentralized archiving via Walrus and Sui.

Economically Aligned

Empowering creators with the SKR token economy.

The TEEPIN Standard

TRUSTED EXECUTION ENVIRONMENT PERSONAL IDENTIFICATION NUMBER

Metadata is easily spoofed. TEEPIN grades the cryptographic integrity of captured media based on the hardware execution environment of the capturing device.

GOLD

Hardware Attested

Captured within a Trusted Execution Environment (e.g. Solana Seeker). Sensor-level signature. Mathematically impossible to spoof.

SILVER

Software Validated

Standard iOS/Android captures protected by rigorous software-level kernel hooks and runtime validation.

Session Bind: One Wallet, One Device.

Reality moves fast. Traditional Web3 UX requires signing transactions for every action—too slow for journalism. Session Bind batches authorizations into a single, time-limited cryptographic handshake.

Sovereign Encrypted Mode ( )

Maximum Privacy in Hostile Environments

> *"The right to record truth must be paired with the right to protect the person recording it."*

Military-Grade Encryption

AES-GCM local device encryption locks data the millisecond it hits the sensor.

Secured by Seal Protocol

Media is encrypted before it is ever written to decentralized storage (Walrus).

Zero Knowledge - You Hold the Keys

The encryption keys are derived directly from the creator's Web3 wallet. Without your signature, decryption is computationally impossible.

The Decentralized Truth Stack

No competitor can match this combination of infrastructure and hardware integration.

Walrus

Specialized blob storage reducing archival costs by ~99%.

Sui Network

Parallel transaction verification for massive scale.

Solana Seeker

TEEPIN hardware-backed trust for gold-standard provenance.

Seal & Nautilus

Future-proofing privacy and autonomous AI validation.

Aligned by Design

Verification must be economically sustainable.

The SKR Token

Incentivizing the network of citizen journalists and institutional participants.

Seeker Hardware Ecosystem

Directly integrated into the devices people use every day, lowering the barrier to entry.

Proof-of-Governance

1 Session = 1 Vote. Governance weighted by physical participation, ensuring wealth cannot buy influence over the truth protocol.

From Prototype to Global Standard

WHAT WE'VE BUILT

- ✓ Functional MVP on Mobile & Web
- ✓ Working Walrus + Sui integration
- ✓ TEEPIN & Session Bind established
- ✓ Sovereign Mode architecture defined

WHAT FUNDING ENABLES

- → Launch verification marketplace
- → Institutional pilots for legal/media
- → Integrate Nautilus AI analysis nodes
- → Expand team to scale global adoption
